## MULTI-POSITION (MP) MEMBRANE SLIDE VALVE

DS6354

**This version of the Membrane Slide Valve is fitted with a sophisticated, infinitely adjustable, positioning cylinder. This enables the valve to open to any position required when given a 3-15 psi pneumatic signal, or a 4-20mA electrical signal.**

### Typical Applications

**The valve is typically used in applications requiring continuous adjustment to keep a constant and accurate flow of product, or for weighing applications where a rapid flow rate can be followed by gradual controlling down to give a very accurate final weight.**
