## AUTO DOUBLE CYLINDER (AD) MEMBRANE SLIDE VALVE

DS6359

- An automatic Membrane Slide Valve designed to be in the fully open or closed position and operated remotely.
- For space constraints the double cylinder is offered as it is much shorter in length compared with the AS version.
- The cylinders are mounted either side of the slide plate rather than at the back.

### **Typical Applications**

- As an automatic isolating valve for allowing maintenance.
- Or for discharging product from one process to the next.
- The bottom of a container or hopper, where automatic discharge operation is required.
- On the outlet or inlet of feeders to isolate from process up and down stream, when maintaining or cleaning down.
- On the outlet of mixers or similar equipment for automatic discharge of mixer on completion of mixing and or isolation when mixing is in operation, as well as many other similar processes.
